

PIERCING AFTERCARE

-Anytime before touching your new piercing make sure to wash your hands thoroughly with antibacterial soap. NOT touching it is an essential part of the healing process. As it should only be when touched when cleaning it.

Without removing the jewelry, gently twist the earrings back and forth while cleansing it with a saline solution/ spray. (Do not use alcohol, hydrogen peroxide, etc. just a saline solution) do this procedure at least twice a day, continuously for 4-6 weeks recommended.

The jewelry should not be removed or changed during the healing process.

Once it is healed you're able to come in the shop for it to be changed to a shorter piece (if needed- due to the fact we do pierce with longer pieces to leave room for swelling) or your own piece of jewelry.

It is recommended that any new earring posts be at least a surgical grade of stainless steel, sterling silver, 10k or 14k gold or other hypoallergenic material.
